

## Material World - New York C-DESIGN® thanks you

Newsletter Week October, 1st 2007

The C-DESIGN® team would like to thank you for visiting our booth at Material World Show, New York.

During the show, professionals from the Fashion Industry discovered the latest Technologies on the market.

C-DESIGN® presented C-DESIGN Fashion®, a computer aided design (CAD) software package that enables designers and pattern makers to design their garments and accessories by quickly adding fabrics, prints, colors and special effects.

The software offers a database of over 18, 000 existing garments, shapes and detailing for women's, men's and kid's fashions. It also includes Technical Packs that make it easy to communicate information such as size specifications, labeling and sewing instructions, and measurement boards to suppliers - further simplifying the production process. Once the designs are complete, customers can use the software to visually merchandise their new collections by easily creating graphics to represent the layout of shop windows, in-store displays or even a fashion show.
